anthology®
Portfolio

Your journey. Your progress. Your story.

With Anthology Portfolio, learners can capture, review, and showcase their growth both inside and outside of the classroom, while educators and administrators use these same inputs to inform course improvement and support program accreditation processes. The result? More reflective learning and instruction, and ongoing program success.

Demonstrate growth and learning outcomes

Enable learners to showcase their growth and achievements over the course of an entire program, from enrollment to graduation. Easy to organize and customize, they can document videos, written assignments, assessments, and more to build a polished, professional collection of work far more impactful than a diploma or GPA — giving them a competitive advantage as they join the workforce or continue their studies.

Data-driven improvement

With real-time tracking and the ability to aggregate and disaggregate data, institutions can leverage learner inputs in Anthology Portfolio to identify and support struggling learners, find ways to enhance course instruction, and improve course curriculum, ensuring they're delivering the best possible educational outcomes for their learners.

"

Before Portfolio, the reports we needed to make data-driven decisions were hard to come by. Every time I run assessment reports in Portfolio, I am amazed at how much I can drill into my data. I can easily aggregate and disaggregate the data to answer specific questions. It is great to have access to all that information at my fingertips."

Nathan Ivers
Department Chair of Counseling | Wake Forest University

Experiential learning assessment and management

Anthology Portfolio streamlines the management and assessment of experiential learning placements at scale, from a single afternoon session in the field to a year-long clinical placement, saving time for administrators and improving the experience for learners.

Powerful and seamless integrations

Designed to integrate across the EdTech ecosystem, Anthology Portfolio enhances and streamlines various assessment activities. LMS integrations support learner artifact submission and grade passback, reducing duplicate work for learners and faculty. Robust bulk and API import options, plagiarism detection integration, and file import options for Dropbox, Google, and OneDrive ensure compatibility with your existing tools.

Approved edTPA provider

Anthology Portfolio is an approved edTPA provider for schools of education, helping teacher candidates by pre-loading the system with current handbooks and tasks, streamlining the process as candidates prepare their responses and transfer their edTPA to Pearson.

> "
> Having the ability to attach assessments to our field placements has made this a simplified process so that all our supervisors (even those that are not tech savvy) can effortlessly enter in their interns' evaluations each semester."
